

Cytisus racemosus

PHEBUS® 'GENI138'

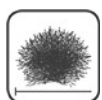

Like a sun in spring!

This INRA – EUROGENI variety has been selected for its regular growth, more compact and branched than the standard species, even without trimming. For production in nurseries no regulators are needed. Beautiful healthy dark green foliage and fine wood. The abundant flowering in March-April is 8 - 10 days later than the Cytisus Racemosus and of a more orangey yellow. A real sun in spring, 'GENI138' must be potgrown and protected during cold winters.
