

Lagerstroemia indica

MIMIE® Fuchsia 'DABLAGÉ01'

Covering growth, prolific bright flowers, early and long lasting

This variety adopts naturally, without trimming, a carpeting, ground covering growth or weeping if the plant is stem trained. This allows an innovative use of the crape myrtle.

MIMIE® Fuchsia 'DABLAGÉ01' is floriferous right from its early age. It blooms precociously and continues all summer long producing successive new flowers (dates vary according to the climate).

No sensitivity to powdery mildew has been noticed.
