

Hydrangea macrophylla **SO LONG® Ebony 'MONMAR'**

In the SO LONG® range :

Ebony, a cultivation with black stems

The SO LONG® range stands out for an important and qualitative re-flowering. Flowering spreads from June to September, thus giving beds or containers a longer summer-flair.

SO LONG® Ebony offers ball-shaped inflorescences of 15 cm diameter on solid purple, almost black stems. The colours range from violet pink in alkaline soil to blue in acid conditions.
