

Daphne x transatlantica

ETERNAL FRAGRANCE 'Blafra'

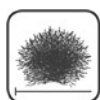

**Nearly everlasting,
very fragrant flowers...**

A mass of light pink flower buds, white flowers at the wilting stage. The flowering is intensely fragrant and almost "everlasting": abundant from June, then flowering again on this year's shoots all summer long until end of October (5 to 6 months). They flower best in full sun, but tolerate half shade. Evergreen to semi-evergreen. Tight and round shape. ETERNAL FRAGRANCE find a place, particularly in the open or in pots next to a habitation.
