

Cotinus coggygria

GOLDEN LADY® 'MINCOJAU03'

A cultivation which will wake up beds and mixed hedges

A real improvement on the existing golden varieties! In spring the young shoots are of a beautiful bright orange which progressively turn golden yellow. The foliage turns to a yellow green in summer that resists to sunlight. It becomes orange in the autumn.

The cream - pink inflorescences appear in July. Being dense, and branching naturally, this cultivation is easy to grow in containers.
