## SERENADE 'Jonade'

### *A serenade of brilliant colours*

SERENADE has a well branched growth. Its leaves show different shades simultaneously: purple brown as the buds burst, then bronze to golden yellow, finally light green. In autumn it turns purple. Plant in a sunny position to show off all these colours at their best. The small creamy white inflorescences stand out harmoniously from the foliage. They are followed by black berries at the end of summer.
