

Hydrangea paniculata **PRIM' RED® 'COUHAPRIM'**

White in late spring and red in summer !

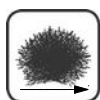

Prim' Red® has been selected for its remarkable precocity and its evolving flower colours.

At the end of May or beginning of June, according to the region, the flowers open to a creamy white which after some weeks turns pink then red. This radiant colour remains for a long time, into July and August, sustaining its decorative interest. The large elegant panicles on fine upright stems contain pink to bright red sterile as well as bright red fertile flowers.
