

Actinidia deliciosa **SOLISSIMO**® 'Renact'

**One plant is enough !
SOLISSIMO® is AUTOFERTILE !**

SOLISSIMO® grows long, slightly twining vigorous climbing vines, which can reach several meters in a year.

It is AUTOFERTILE. There is no need for a male variety to get fruit. In May and June the previous years' growth bears white flowers. In summer, the vines carry bunches of kiwi fruit. From the third year onward, the plant provides many medium-sized fruits. Sweet and juicy, they are rich in vitamins. They should be picked after the first frost and can be kept until the following March.
