

Distylium

BLUE CASCADE® 'PIIDIST-II'

A novelty amongst the small evergreen shrubs

Resistant to insects and pathogenic agents, tolerating drought and heat, BLUE CASCADE® is an excellent replacement for traditional evergreen shrubs. Bronze during budding, the long and narrow leaves then turn to an original mat blue-green.

Its dense and compact cascading growth, allows it to be used in low hedges or as ground cover, in regions with temperate winters (hardy down to -15°C). It is also happy grown in pots. Avoid too basic ph soil.
