

Stokesia laevis

'Mels Blue'

*A profusion of shiny flowers
on upright stems*

'Mels Blue' is upright, regularly rounded, well branched from the base - it catches the eye from a distance. The robust, straight floral stems carry many wide, brightly-coloured flowerheads. Elegantly cut blue-purple ray florets surround a white disc.

Flowering from the end of June, a profusion of blooms are renewed all summer. Recommended for flowerbeds or tubs.
