

Pittosporum tenuifolium 'Golden Ball'

A golden ball for low hedges or in isolation

The very dense 'Golden Ball' naturally forms a ball of less than one meter with perennial very brilliant golden foliage. Its young golden-yellow leaves contrast with the older yellow-green leaves edged with a stronger green. Fast-growing and branching from the base, resistant to drought, wind and seaspray, it is ideal for small spaces, low hedges, pots and for topiary, like a box.
