

# Rhododendron Lady Lasa® 'BOUTI0150'

## Shades of coral and salmon

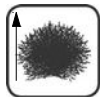

A very fashionable colour for this floriferous variety with well-rounded inflorescences, Lady Lasa® is a small rhododendron which forms a round, dense semi-dwarf plant, highly resistant to disease. Its young shoots are purple-brown, the long leaves change from light to dark green.

A multitude of big round buds open out into shiny bouquets at the end of April.
