

Clematis x Princesse Arabelle®

'CERpara'

A sumptuous clematis for urban gardens

A combination of 'Arabella' x 'Princess Diana', this clematis has large, single flowers with long petals and spaced edges, giving it a starry appearance. Blooms range from light pink to old pink, appearing in early summer and remontant in late summer. Its compact habit makes it ideal for containers, terraces or balconies. It is easy to care for and starts up again from the base every year.
