

Malus x LE PHARE® 'RS-KRC'

A garden landmark

This ornamental apple tree is highly original, with a columnar shape that becomes pyramidal with age. It has spectacular bright red blossom buds that turn carmine pink.

Its purple foliage in spring also brings a touch of colour to the garden. Its ornamental character continues in autumn with its many plum-sized violet-red fruits, which remain until late autumn.

It will do perfectly well in the ground, in a sunny spot.
