

Hydrangea paniculata

Living Little Love® 'LCNO20'

A small panicle hydrangea in the colours of love

This variety flowers abundantly from July onwards, changing from green to creamy white and then pink at the end of the season. The shape of the shrub is compact. The panicles are numerous, dense and rounded.

The Hydrangea paniculata in the Living Creation® range have been selected for their strong stems, the quality and duration of their flowering and their original colours. The Little series brings together small-growth varieties, particularly suited to pots and small gardens.
