

Prunus laurocerasus **GENOLIA**® 'Mariblon'

For a naturally narrow and hardy hedge.

This variety has been selected in Switzerland for its erect and narrow growth. It only needs light pruning. Therefore it is ideal for a narrow hedge.

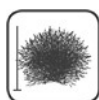

The foliage is shiny dark green, quite elongated and resists well to low temperatures. GENOLIA® does not thin out at the base and can stand the weight of snow thanks to its erect and strong branches.

It has discrete flowers and the fruits are not very abundant.
