

Magnolia 'Genie'

***A compact magnolia,
with beautiful bright purple tulips***

'Genie' has all the qualities of a good hybrid. Right from the beginning, it is very floriferous, and before the leaves appear, it has very big, stable, bright purple, tulip shaped flowers. They are lightly scented, long-lasting, and resist temperatures of down to -3°C. In good conditions, a second flowering can bloom in summer. Dense and upright growth, good branching, moderate dimensions: an asset, planted in small areas, grown as shrub or tree.
