

## Daphne x transatlantica PINK FRAGRANCE 'Blapink'

### Fragrant flowers all summer long...

The flowering is intensely fragrant and almost "everlasting": abundant from June, then flowering again on this year's shoots all summer long until end of October (5 to 6 months). At the beginning of the season, the flowers are violet pink, in the summer and autumn they are light pink to white. Best in full sun, but tolerate half shade.

Evergreen to semi-evergreen. Tight and round shape. PINK FRAGRANCE find a place, particularly in the open or in pots next to a habitation.
