

Salvia x jamensis RÊVE ROUGE® 'FAURESAL02'

Really red !

The flowering-period ranges from May to October. These quite long clusters of flower heads are well stocked with good sized flowers that are of a new deep velvet red, enhanced by the dark brown calix. The glossy dark green, semi-evergreen foliage is aromatic.

These are easy garden plants, in well draining soil, but can also be grown in pots. The Sage varieties sold by SAPHO also offer a beautiful pallet of colours.
