

# Hydrangea anomala ssp petiolaris

## 'Silver Lining'

*Bright with its green - grey  
variegated foliage, edged in white*

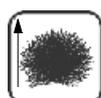

'Silver Lining' catches the eye with its dense and bright foliage. The green-grey leaf blade is nicely mixed with paler green, edged in bright white with some overflows towards the interior.

In June-July it is covered in big corymbs of fertile flowers encircled with white sterile flowers.

It is of medium growth and attaches itself to its support by air roots. It can be trained against a wall or planted as ground cover ; it grows well in tubs.
