

Passiflora

RIVERSIDE® 'Snow Queen'

Walls, trellises and pots : a graphic passion flower from May to the frosts

This polyploid hybrid is evergreen in mild winter regions but must be protected under -8°C. The big foliage is dark green and shiny.

From May on several flowers appear daily. They surprise us with the pure white of their petals, sepals and filament crowns. The 5 green stamens and the 3 dark stigmata stand out well. The scented flowers last several days. They are followed by non-edible yellow-orange fruits.
