

Potentilla fruct. X vilmoriniana (= Dasiphora)

SILVER 'N GOLD 'LISSTREAS'

The marriage of golden yellow flowers with a silver foliage.

This Potentilla shows attractively silky, silvered foliage that contrasts with large, intensely golden yellow flowers. The charm endures, thanks to its ready re-flowering. Silver N' Gold is a vigorous plant with an upright habit thanks to its solid branches.

It likes sandy, even stony, well-drained soils, exposed to the sun. Every 2 – 3 years eliminate the old stems in order to renew the bush.
