

## Hibiscus x Raijin® 'AKATA88'

*Superb blooms and reduced size, a moscheutos  
Hibiscus type for growing in pots*

A small, readily branching plant with superb glossy red flowers and naturally compact habit, making it particularly suited to growing in pots.

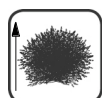

The flowers are numerous and broad but proportioned to the size of the plant. Flowering begins in July and continues throughout the summer. Pruning can encourage late flowering.

A perennial plant with clear green foliage.
