

Forsythia x intermedia **MIKADOR® 'MINFOR6'**

A treasure for gardens and nurseries.

MIKADOR®, is the assurance of a homogeneous production and minimum loss in cultivation.

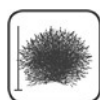

Its particularly dense and compact growth gives it a harmoniously branched and rounded profile, without having to be pruned.

In early spring it brings a touch of sunshine to gardens, terraces or balconies. It is remarkable in March - April because of its abundant flowering and its branches covered with bright yellow-orange flowers. Then follow beautiful, shiny dark green, lance-shaped leaves.
