

Hibiscus moscheutos PLANET® Solène 'TANSOL'

This is elegance ...

The PLANET® range has been selected for precocity and duration of the flowering period; it is more suited for temperate summers.

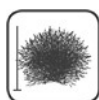

Equally relevant were the originality of the colouring, the transparency of the flowers playing with sunlight, the quality of the foliage, good branching out and resistance to the cold.

PLANET® Solène has superb early pink flowers in summer, with slightly wavy petals and green foliage with crimson reflections, superior to classic varieties.
